Mark Shteyn

862-253-7800 | markshteyn1@gmail.com | linkedin.com/in/markshteyn | github.com/mxy680

Available 20 hours/week now | Full-time after May 2027 | Remote, Austin, or Miami

Education

Case Western Reserve University — Expected May 2027
BS in Data Science — *Cleveland, OH*

Experience

Founder & Applied AI Engineer — Summer 2026 – Present
ENGAGENT LLC — *Part-time business*

- Founded an AI agents and automation business serving paying clients; delivered 12 operational systems for SoundAsleep Products plus solutions for real estate and optical clients
- Built Minions, a multi-app agent platform using APIs, browser automation, and Supabase/PostgreSQL to turn business data into client-facing dashboards and decision-support workflows
- Developed scheduled, resumable workflows with deterministic validation, human approval controls, and recovery handling to support reliable client operations

Machine Learning Researcher — Sep. 2024 – May 2026
MDS3, SDLE Research Center, Case Western Reserve University — *Cleveland, OH*

- Researched spatio-temporal graph neural networks for laser powder bed additive manufacturing and developed image-segmentation models for a materials-analysis library
- Contributed to a manuscript in preparation comparing 5 PyTorch segmentation architectures across 113 SEM images and 6 photovoltaic-material classes
- Built and trained a conditional GAN to generate synthetic images for datasets with limited samples, supporting experiments in limited-data settings.

Machine Learning Intern — Summers 2022, 2023 & 2024
EPIC Insurance Brokers & Consultants — *Jersey City, NJ*

- Built an internal policy and procedure RAG assistant; benchmarked fixed, recursive, and semantic chunking strategies across retrieval accuracy and latency
- Independently developed an embedding- and LLM-powered application for cross-company record matching; built Python/SQL validation tooling for production data pipelines

Projects

LLNL Data Science Challenge | *Python, ECG data, machine learning* — Jul. – Aug. 2024

- Developed algorithms for high-resolution cardiac mapping using multimodal 12-lead ECG data; guided a four-student team and taught deep-learning fundamentals

AnyVec | *Python, embeddings, multimodal processing* — 2025

- Published a unified Python package for vectorizing text, documents, images, audio, video, and code; reached 300+ weekly downloads at launch

Leadership & Recognition

- Mentored 150+ students in Python, ML, computer vision, and LLMs through the National Student Leadership Conference at UC Berkeley and Duke (Summer 2025)
- Hackathon placements include 1st at CWRU DataFest and 2nd at the Meta Llama 3 Hackathon; raised $13K+ in prizes as HackCWRU Co-President

Technical Skills

Languages: Python, SQL, TypeScript/JavaScript, Go
AI & Data: LLMs, AI agents, RAG, embeddings, multimodal AI, PyTorch, model evaluation, computer vision
Tools & Frameworks: FastAPI, PostgreSQL, Supabase, Docker, Next.js, REST APIs, FAISS, Weaviate
