Remote / Austin, TX / Miami, FL | 20 hours/week now; full-time after May 2027 | U.S. citizen

Applied AI builder with paying-client experience through ENGAGENT, three summer ML internships in insurance, and university research. Builds agents, retrieval workflows, and multimodal applications that connect models to practical user and business needs.

EXPERIENCE

Founder & Applied AI Engineer | ENGAGENT LLC

Summer 2026 - Present

- Founded a part-time business selling AI agents and automations to paying clients.
- Built Minions, an agent platform connecting business integrations, scheduled workflows, client-facing dashboards, and human approval controls.
- Developed workflows for operational reporting, monitoring, decision support, and business-process automation.

Machine Learning Researcher | MDS3 / SDLE Research Center, CWRU

Sep 2024 - May 2026

- Developed image-segmentation models and spatio-temporal graph neural networks for additive-manufacturing and materials-data research.
- Built preprocessing, training, and evaluation workflows; explored conditional GANs for synthetic images in limited-data settings.

Machine Learning Intern | EPIC Insurance Brokers & Consultants

Summers 2022, 2023 & 2024

- Built an internal policy and procedure Q&A assistant using LLMs and retrieval; compared fixed, recursive, and semantic chunking strategies.
- Developed an embeddings- and LLM-based record-matching tool for multiple sister companies.

SELECTED PROJECTS

Reef | Multimodal AI study companion

In development

- Building a study application combining handwritten STEM work, document understanding, and voice-based AI interaction.
- Integrated multimodal model calls with structured responses, token-usage tracking, timeouts, and retry handling.

AnyVec | Multimodal processing and vectorization

Public project

- Built a Python interface for processing text, documents, images, audio, video, and code through a shared vectorization workflow.
- Combined file-type-specific extraction with API-backed embeddings for downstream similarity and retrieval applications.

EDUCATION & LEADERSHIP

Case Western Reserve University | BS in Data Science, expected May 2027

National Student Leadership Conference | Summer 2025: taught and mentored students in Python, ML, computer vision, and LLMs at UC Berkeley and Duke.

TECHNICAL FOCUS

Python, SQL, TypeScript | LLM applications, AI agents, retrieval-augmented generation (RAG), embeddings, multimodal processing | PyTorch, FastAPI, PostgreSQL, Supabase, Docker
